

BUSINESS CASE-STUDY

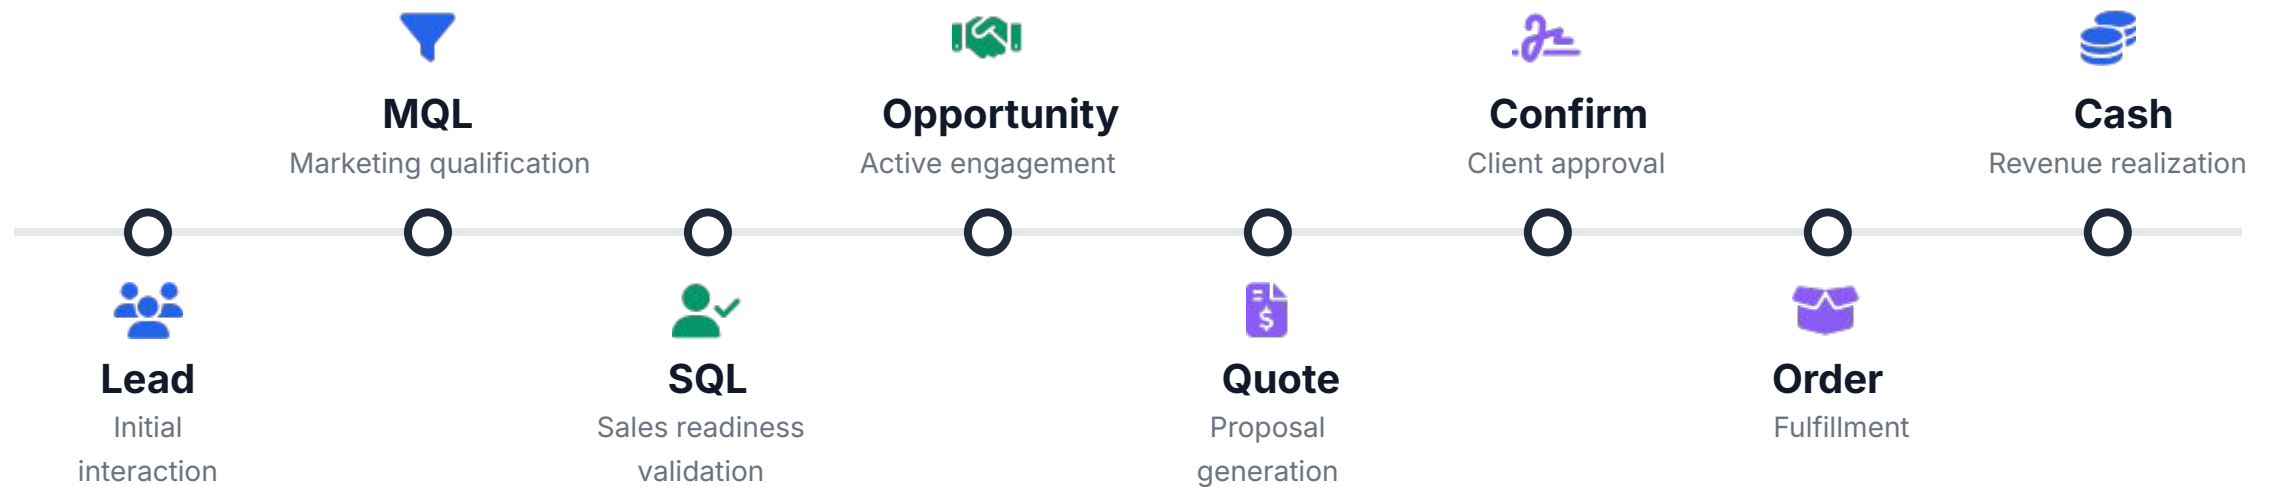

Sales Effectiveness Internship

14th July 2026

The Lead-to-Cash Process

A holistic view of the commercial pipeline.

- Complex system
- Multiple components: Different teams and stages involved
- Friction at any point propagates

Defining Sales Effectiveness

It requires a robust structural foundation to ensure seamless, friction-free transitions across every stage.

Data Governance

- ✓ **Single Source of Truth:** Complete and accurate data.
- ✓ **Systematic Governance:** Proactive quality control.

Standardized Processes

- ✓ **Predictable Execution:** Uniform workflows across teams.
- ✓ **Reduced Variability:** Elimination of bottlenecks.

Scalable Operations

- ✓ **Reduced Dependency:** Less manual intervention to gain speed.
- ✓ **Strategic Automation:** Focus on high-value interactions.

The Anatomy of Operational Friction

Organizational capabilities do not fail in isolation. Weaknesses accumulate across four critical dimensions: People, Process, Technology, and Data.

1. Data governance Vulnerabilities

DATA

Fragmented information and lack of a single-source truth.

PROCESS

Missing data entry standards and poor governance rules.

2. Standardized Process Vulnerabilities

PROCESS

Inconsistent workflows, undefined ownership, and non-standard rules.

PEOPLE

Lack of alignment across departments.

3. Scalable Ops Vulnerabilities

TECH

Low automation readiness; systems not supporting business logic.

PEOPLE

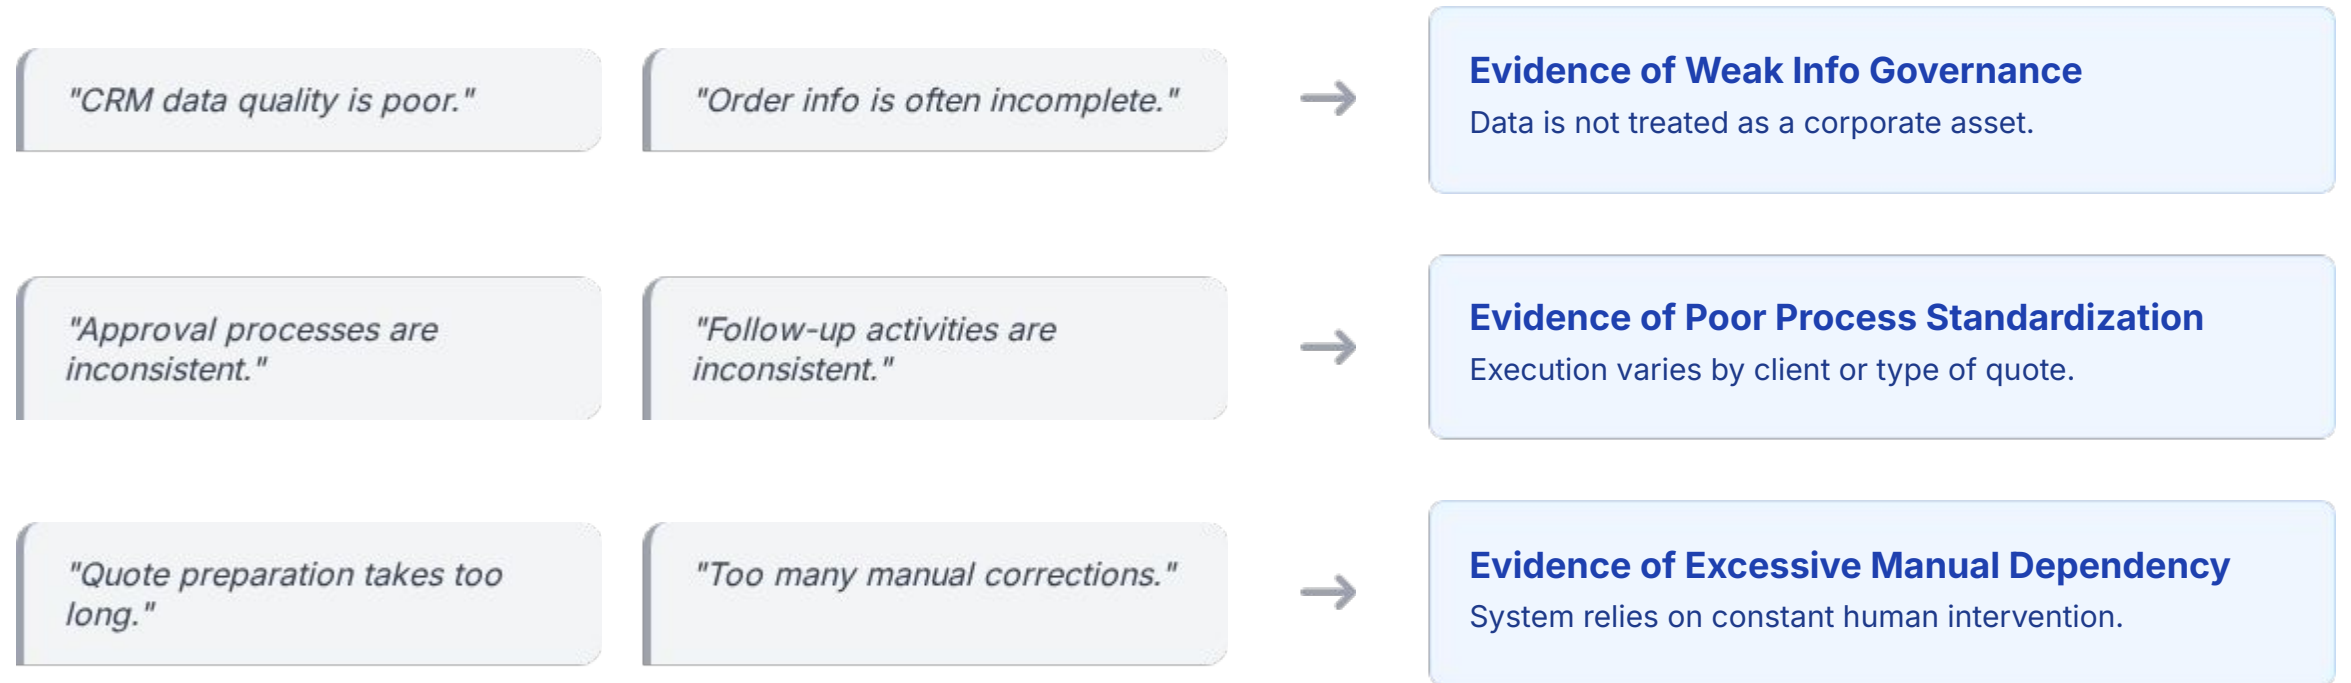

High dependency on manual interventions and isolated heroics.

Key Takeaway: Understand underlying root causes.

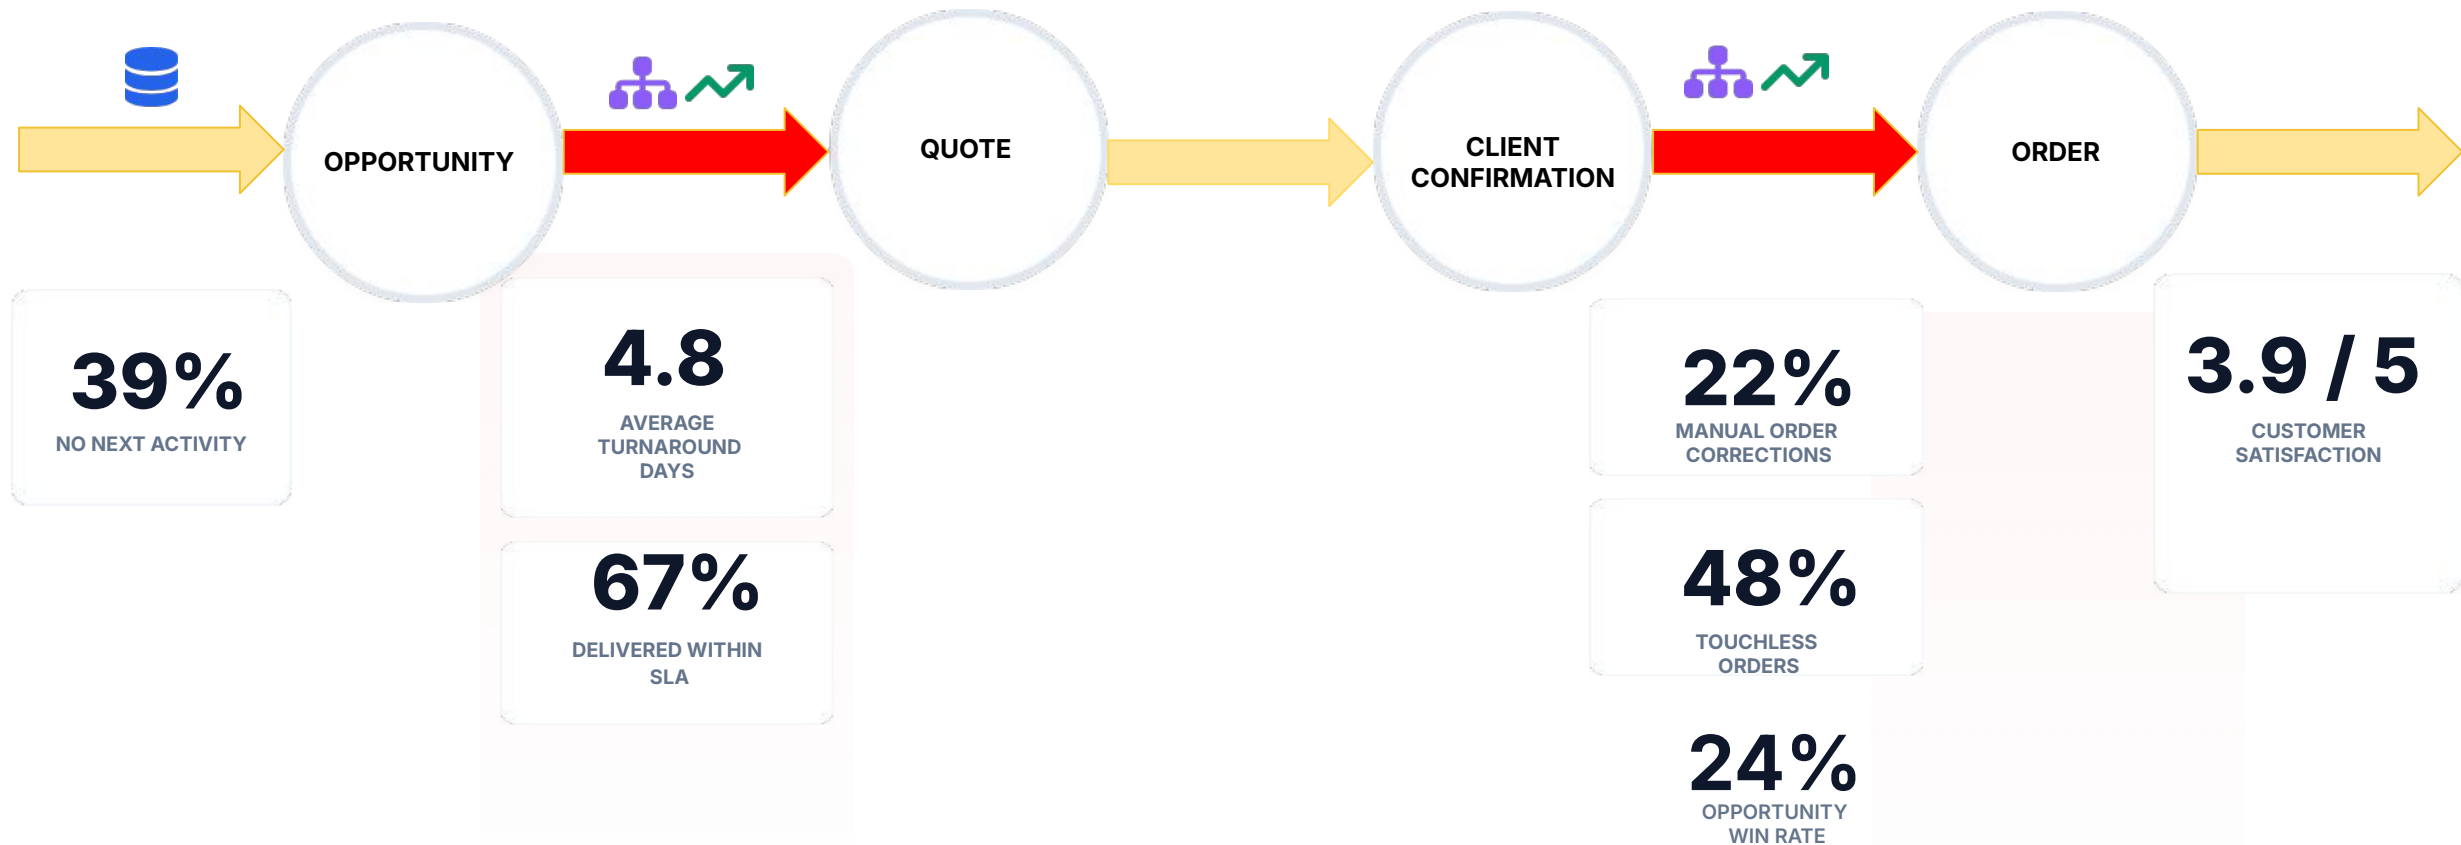

Listening to the Process

By mapping qualitative departmental feedback to our operational capabilities, clear patterns emerge validating our structural weaknesses.

Locating the Friction: Transition Breakdowns

Business performance deteriorates when information, decisions, and responsibilities fail to flow smoothly from one stage to the next. KPIs are symptoms of these hand-off failures.

Selecting the Highest-Leverage Initiative

The selected initiative must strengthen the organizational capabilities that sustain operational excellence.

	Data Governance	Standardized Processes	Scalable Operations
CRM Adoption & Sales Manager Coaching Program			
Quote-to-Order Automation Program			
Data Quality and Reporting Improvement Initiative			

Why?

- ✓ Addresses the two most critical process transitions.
- ✓ Strengthens all three building blocks simultaneously.
- ✓ Ensures quality provisioned services to "infinite" clients

Implementation Roadmap

PHASE 1 • MONTHS 0–3

Build the Foundation

"I will not automate an inconsistent process."

Reliable Information

- Define mandatory CRM fields
- Standardize master data
- Assign data ownership
- Introduce validation rules

Standardized Processes

- Standardize quote approval workflow
- Define approval rules
- Clarify ownership between teams
- Eliminate process inconsistencies

PHASE 2 • MONTHS 3–12

Workflow Automation

Only automate the critical bottlenecks identified during the operational analysis.

Quote Generation Tool

Target: Opportunity → Quote

- Automatic quote generation
- Automated approval routing
- Mandatory data validation

Order Generation Tool

Target: Confirmation → Order

- Automatic order creation
- Auto-transfer from approved quotes
- Eliminate manual re-entry
- Order validation gates

PHASE 3 • 12+ MONTHS

Continuous Improvement

- **Monitor operational KPIs** to ensure target metrics are met.
- **Gather user feedback** systematically from sales and ops.
- **Refine automation rules** as business logic evolves.

WRAP UP

The Path Forward
